“stepped-up efforts to reduce greenhouse gas emissions and strengthen resilience and adaptive capacity to climate-induced impacts, including: climate related hazards in all countries; integrating climate change measures into national policies, strategies and planning; and improving education, awareness-raising and human and institutional capacity with respect to climate change mitigation, adaptation, impact reduction and early warning.”

United Nations Development Programme

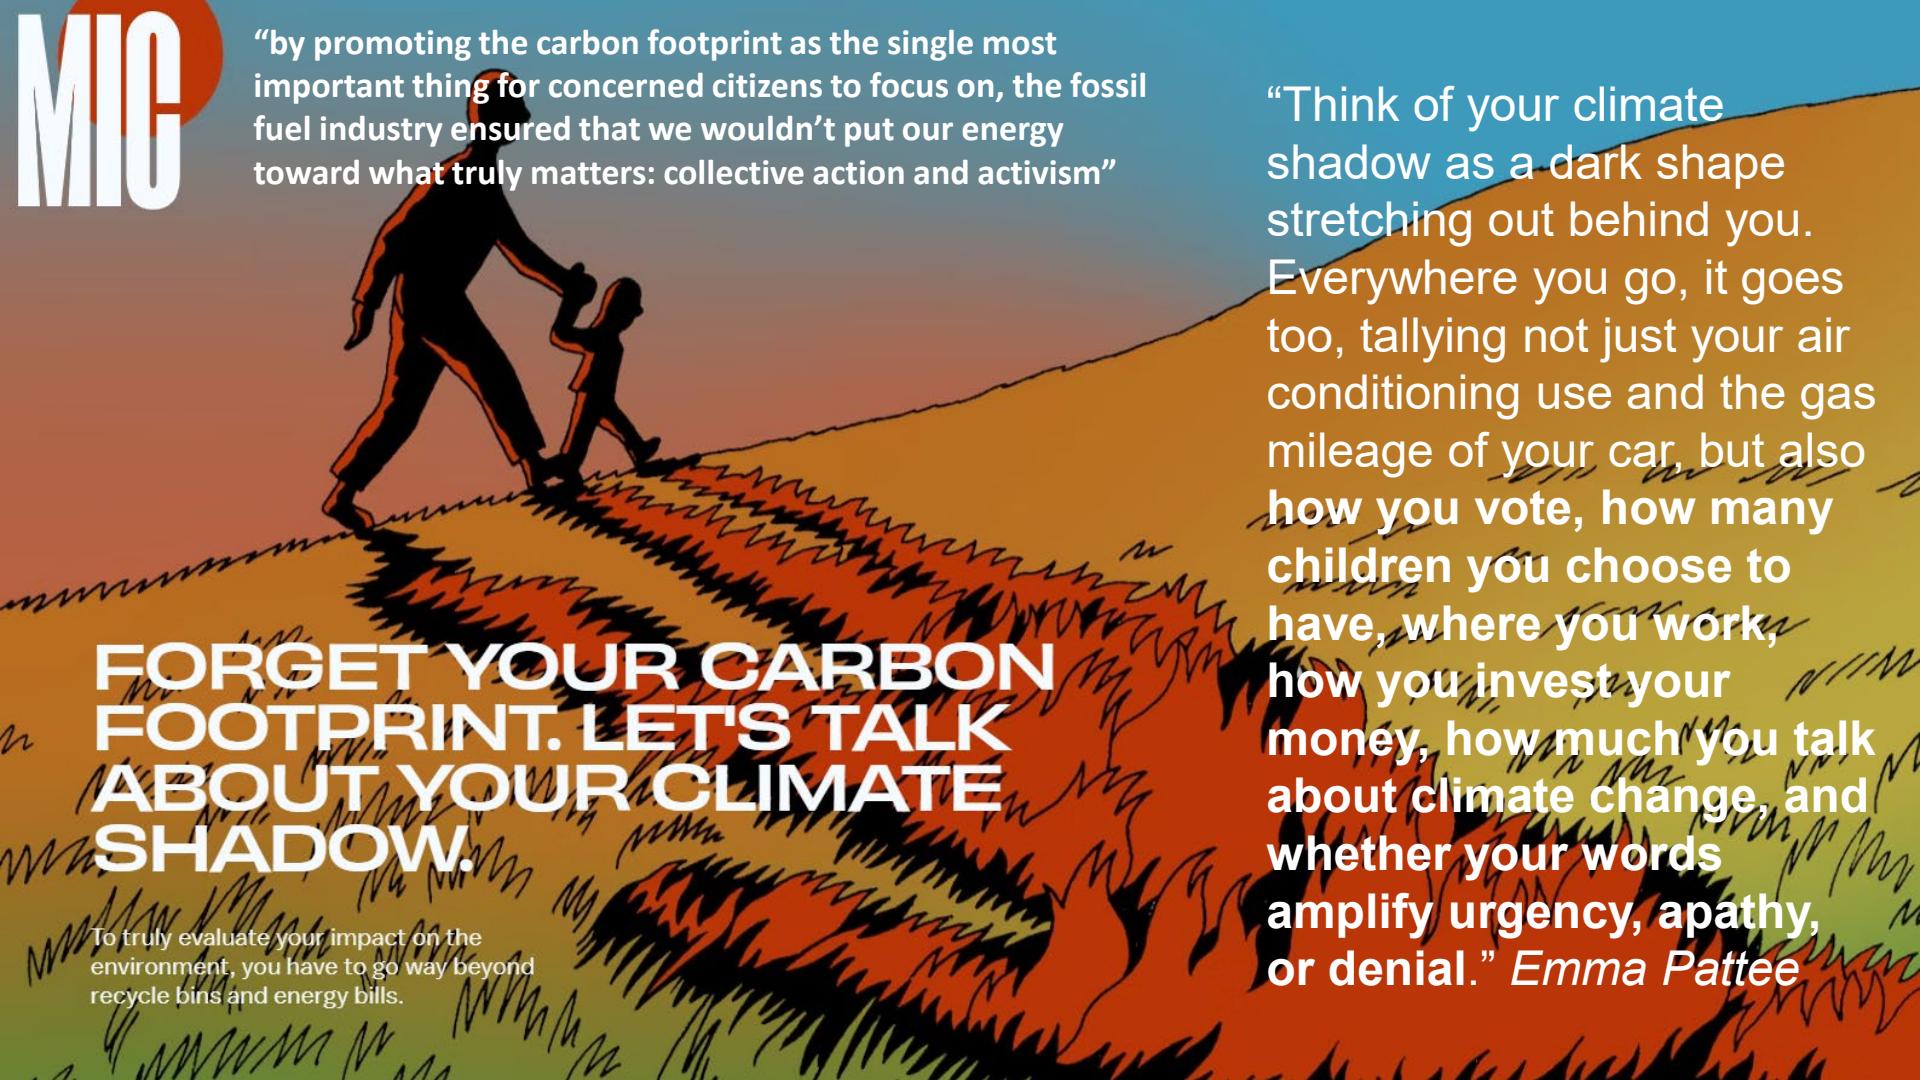

What is climate action?

How can we step up our efforts as professionals, as humans?

“What we’re being told to do is change your cotton buds and all these pathetic micro-consumerist b*lllocks which just isn’t going to get us anywhere. There are one or two things you can do as a consumer which do make change: **switch to a plant-based diet**, that’s one – big change because animal farming has this massive environmental impact; another one – **stop flying**. But beyond that, actually everything we have to do is **change the system**; we have to overthrow this system which is eating the planet” *George Monbiot*

“by promoting the carbon footprint as the single most important thing for concerned citizens to focus on, the fossil fuel industry ensured that we wouldn’t put our energy toward what truly matters: collective action and activism”

FORGET YOUR CARBON FOOTPRINT. LET'S TALK ABOUT YOUR CLIMATE SHADOW.

To truly evaluate your impact on the environment, you have to go way beyond recycle bins and energy bills.

“Think of your climate shadow as a dark shape stretching out behind you. Everywhere you go, it goes too, tallying not just your air conditioning use and the gas mileage of your car, but also **how you vote, how many children you choose to have, where you work, how you invest your money, how much you talk about climate change, and whether your words amplify urgency, apathy, or denial.**” *Emma Pattee*

Decarbonising Transport

A Better, Greener Britain

Climate change

By eating vegetarian food for a year you could save the same amount of emissions as a family taking a small car off the road for 6 months [3]. You might not be able to stop using your car in day-to-day life, but you can choose to eat veggie food.

DfT told to release forecast traffic levels behind net zero projections

15 November 2022

In a significant decision just made by the Information Commissioner, the DfT is being required to publish the assumptions behind the trajectories towards net zero that appeared in its Transport Decarbonisation Plan.

The Freedom of Information request that led to the decision was made by Professor Greg Marsden of Leeds University, who says it is vital both transport professionals and the public know the tough changes transport must make to meet decarbonisation targets, and that all share the same forecasts on which they are based.

• This article is more than 1 month old

CO2 emissions may be starting to plateau, says global energy watchdog

IEA records rise of less than 1% from energy use in 2022, but 7% reduction needed every year this decade to meet emissions goal

 The cooling towers of a lignite-fired power station in Germany. Emissions from coal grew by 1.6% last year, less than had been feared. Photograph: Florian Gaertner/Photothek/ Getty Images
Global carbon dioxide emissions are still rising but may at least be reaching a plateau, [research from the International Energy Agency](#) has shown.

CO₂ from energy - by far the biggest source of emissions - increased by less than 1% in 2022. This was despite the turmoil in energy markets [caused by Russia's invasion of Ukraine](#).

The rise is smaller than the 6% increase in emissions from energy recorded by the IEA in 2021, a leap that came on the back of the rebound from the Covid-19 pandemic.

However, **a 7% reduction is needed every year** to meet the goal of halving emissions this decade.

Cop28: what could the climate conference achieve?

A potential peak in greenhouse gas emissions, methane efforts and climate finance are among the reasons for optimism

If current growth in renewable energy continues, and if countries take action on cutting greenhouse gases such as methane, then next year could be the year in which greenhouse gas emissions at last reach their peak.

These are big ifs. The finding, from a respected group of scientists, is heavily hedged. [Renewable energy](#) rates could falter, fossil fuel companies will continue to seek to expand, and countries may fail to take the action needed.

But if the long-awaited peak can be reached, and if emissions continue to fall in the following years, it would mark a watershed moment for humanity.

next year could be the year in which greenhouse gas emissions at last reach their peak

Deep divisions ahead of crucial UN climate talks

6 days ago

 COP28

COP28 president Sultan Al Jaber (centre) is hosting delegates in Abu Dhabi ahead of the conference in Dubai

Mr Al Jaber accepted that achieving that **will** require deep emissions cuts.

"We need solid solutions for a 43% cut in emissions by 2030, because that is exactly what the science is telling us," he said.

But for many in the audience that commitment rang hollow, not least because **Mr Al Jaber's oil company has bold expansion plans over the same period.**

It plans to increase capacity by 600,000 barrels a day by 2030 and is spending \$150bn in the process.

We've begun to institutionalise climate change and lean on regulation and pathways of intend instead of confronting reality with honesty and transparency.

To help people find their place in the climate conversation there is a need to begin with the things that matter to them in their lives and then invite them to discover how these connect to the climate crisis.

We can't leave this to someone else because the authoritarianism and fascism is creeping in at an ever-increasing rate.

“If you think it’s risky speaking up in a meeting, consider the risk of food supply collapsing and our economy falling over – recalibrate your risk and upscale your risk to discover what you’re capable of.”

“When you are in that situation where you’ve been handcuffed, being led away by the police, you feel this tremendous sense of peace coming over you.”

I feel very much on this spectrum between wanting to be seen as credible and have influence vs speaking the unvarnished truth / calling things out.

👉 Your mental health and wellbeing should be your top priority

👉 It can take a long time to be confident being you but it's worth it

👉 When you are your authentic self you speak with conviction and grow credibility

👉 "A comfort zone is a wonderful place but nothing ever grows there"

Finding and being your **authentic self**

2021

Hope is not about
making people feel
more comfortable,
hope is being
honest and facing
our fears

A close-up photograph of a man with a beard and glasses, wearing a grey t-shirt, holding a baby in his arms. The man is looking down at the baby with a gentle expression. The baby is wearing a light-colored, ribbed onesie with a small floral pattern on the bottom. They are in a room with a wooden floor and a white radiator in the background. A red text box is overlaid on the upper right side of the image.

Make your capacity to
influence count –
**Younger generations
are counting on you!**
